Assignment: Introduction to Bootstrap

Task Instructions:
1. Create a New Folder:
   - In your workspace, create a new folder named bootstrap.
   - Connect your folder to a new repository on GitHub named "Bootstrap".
2. Build the HTML Page:
   - Inside the bootstrap folder, create an HTML file (index.html).
   - Implement the following Bootstrap components within the index.html page:
     - Bootstrap Carousel for image slideshows.
     - A header containing a Bootstrap navbar for navigation links (contect them to external resources like your linkedin)
     - A footer with a copyright message.

Submission Guidelines:
1. Open your project deliverable folder in your workspace.
2. In the document where you track your project deliverables (e.g., yourname.md), update the assignment section with the following format:
Assignment 2: [Insert Link Here]
Replace [Insert Link Here] with the actual URL of your GitHub repository that contains the Bootstrap assignment.
3. Include Your GitHub Repository Link.

Git Commands to Remember:
- Check the status of your changes: git status
- Stage all your changes: git add .
- Commit your changes with a descriptive message: git commit -m "Description of your changes"
- Push your changes to GitHub:git push

Assistance:
If you encounter any challenges or need further clarification, feel free to schedule a one-on-one meeting with myself, Usmar, or Massoud for support.
